Target Audience

Anyone desires a practical, technical introduction to the field of networking. High-school, community college, and lifelong-learning students interested in careers as network technicians, network engineers, network administrators, and network help-desk staff.

Prerequisites

- Students should have Reading Age Level (RAL) of 13.
- Successful completion of CCNA 3.

Course Description

CCNA 4: WAN Technologies is the last of four courses leading to the Cisco Certified Network Associate (CCNA) designation. The course focuses on advanced IP addressing techniques (Network Address Translation [NAT], Port Address Translation [PAT], and DHCP), WAN technology and terminology, PPP, ISDN, DDR, Frame Relay, network management, and introduction to optical networking. Particular emphasis is given to students being able to demonstrate the ability to apply knowledge from CCNA 1, CCNA 2, and CCNA 3 to a network and to be able to explain how and why a particular strategy is employed. In addition, the student will prepare for taking the CCNA Exam.

Course Objectives

The CCNA certification indicates knowledge of networking for the small-office, home-office (SOHO) market and the ability to work in small businesses or organizations whose networks have fewer than 100 nodes. A CCNA certified individual can:

- Install and configure Cisco switches and routers in multiprotocol internetworks using LAN and WAN interfaces
- Provide Level 1 troubleshooting service
- Improve network performance and security
- Perform entry-level tasks in the planning, design, installation, operation and troubleshooting of Ethernet, TCP/IP Networks.

CCNA 4 is an integral step towards achieving CCNA Certification.

Upon completion of this course, students will be able to perform tasks related to:

- Network Address Translation (NAT) and Port Address Translation (PAT)

- Dynamic Host Configuration Protocol (DHCP)
- WAN Technologies
- Point-to-Point Protocol (PPP)
- Integrated Services Digital Network (ISDN)
- Dial-on-Demand Routing (DDR)
- Frame Relay
- Network Management
- Optical Networking

Course Overview

The course has been designed for 70 contact hours. Approximately 35 hours will be designated to lab activities and 35 hours on curriculum content. A case study on structured cabling is required, but format and timing are determined by the Local Academy.

What has changed from CCNA versions 2.x?

- Removal of Net Plus and TCS Chapters
- Case study required; format and timing determined by Local Academy
- Addition of More WAN Terminology (especially Cable Modem and Broadband)
- Addition of Emerging Technologies Module
- Revision of Network Management Materials
- More interactive Flash activities
- Sequence of > 40 eLabs
- Lab focus on hands-on labs; more eLab support for Academies without Adtrans

Course Outline

Module 1. Scaling IP Addresses

Overview

1.1 Scaling networks with NAT and PAT

- 1.1.1 Private addressing
- 1.1.2 Introducing NAT and PAT
- 1.1.3 Major NAT and PAT features
- 1.1.4 Configuring NAT and PAT
- 1.1.5 Verifying PAT configuration
- 1.1.6 Troubleshooting the NAT and PAT configuration
- 1.1.7 Issues with NAT

1.2 DHCP

- 1.2.1 Introducing DHCP
- 1.2.2 BootP and DHCP differences
- 1.2.3 Major DHCP features
- 1.2.4 DHCP operation
- 1.2.5 Configuring DHCP
- 1.2.6 Verifying DHCP operation
- 1.2.7 Troubleshooting DHCP
- 1.2.8 DHCP Relay

Summary

Module 2. WAN Technologies

Overview

2.1 WAN Technologies Overview

- 2.1.1 WAN technology
- 2.1.2 WAN devices
- 2.1.3 WAN standards
- 2.1.4 WAN encapsulation
- 2.1.5 Packet and circuit switching
- 2.1.6 WAN link options

2.2 WAN Technologies

- 2.2.1 Analog dialup
- 2.2.2 ISDN dialup

- 2.2.3 Leased line
 - 2.2.4 X.25
 - 2.2.5 Frame Relay
 - 2.2.6 ATM
 - 2.2.7 DSL
 - 2.2.8 Cable modem
- 2.3 WAN Design
- 2.3.1 WAN communication
 - 2.3.2 Steps in WAN design
 - 2.3.3 How to identify and select networking capabilities
 - 2.3.4 Three-layer design model
 - 2.3.5 Other layered design models
 - 2.3.6 Other WAN design considerations

Summary

Module 3. PPP

Overview

3.1 Serial Point-to-Point Links

- 3.1.1 Introduction to serial communication
- 3.1.2 Time-division multiplexing
- 3.1.3 Demarcation point
- 3.1.4 DTE-DCE
- 3.1.5 HDLC encapsulation
- 3.1.6 Configuring HDLC encapsulation
- 3.1.7 Troubleshooting a serial interface

3.2 PPP

- 3.2.1 PPP layered architecture
- 3.2.2 Establishing a PPP session
- 3.2.3 PPP authentication protocols
- 3.2.4 Password Authentication Protocol (PAP)
- 3.2.5 Challenge Handshake Authentication Protocol (CHAP)
- 3.2.6 PPP encapsulation and authentication process

3.3 PPP Configuration

- 3.3.1 Introduction to configuring PPP
- 3.3.2 Configuring PPP

- 3.3.3 Configuring PPP authentication
 - 3.3.4 Verifying the serial PPP encapsulation configuration
 - 3.3.5 Troubleshooting the serial PPP encapsulation configuration
- Summary

Module 4. ISDN and DDR

Overview

4.1 ISDN Concepts

- 4.1.1 Introducing ISDN
- 4.1.2 ISDN standards and access methods
- 4.1.3 ISDN 3-layer model and protocols
- 4.1.4 ISDN functions
- 4.1.5 ISDN reference points
- 4.1.6 Determining the router ISDN interface
- 4.1.7 ISDN switch types

4.2 ISDN Configuration

- 4.2.1 Configuring ISDN BRI
- 4.2.2 Configuring ISDN PRI
- 4.2.3 Verifying the ISDN configuration
- 4.2.4 Troubleshooting the ISDN configuration

4.3 DDR Configuration

- 4.3.1 DDR operation
- 4.3.2 Configuring legacy DDR
- 4.3.3 Defining static routes for DDR
- 4.3.4 Specifying interesting traffic for DDR
- 4.3.5 Configuring DDR dialer information
- 4.3.6 Dialer profiles
- 4.3.7 Configuring dialer profiles
- 4.3.8 Verifying DDR configuration
- 4.3.9 Troubleshooting the DDR configuration

Summary

Module 5. Frame Relay

Overview

- 5.1 Frame Relay Concepts
 - 5.1.1 Introducing Frame Relay
 - 5.1.2 Frame Relay terminology
 - 5.1.3 Frame Relay stack layered support
 - 5.1.4 Frame Relay bandwidth and flow control
 - 5.1.5 Frame Relay address mapping/topology
 - 5.1.6 Frame Relay LMI
 - 5.1.7 Stages of Inverse ARP and LMI operation

5.2 Basic Frame Relay Configuration

- 5.2.1 Configuring basic Frame Relay
- 5.2.2 Configuring a static Frame Relay map
- 5.2.3 Reachability issues with routing updates in NBMA
- 5.2.4 Frame Relay subinterfaces
- 5.2.5 Configuring Frame Relay subinterfaces
- 5.2.6 Verifying the Frame Relay configuration
- 5.2.7 Troubleshooting the Frame Relay configuration

Summary

Module 6. Introduction to Network Administration

Overview

6.1 Workstations and Servers

- 6.1.1 Workstations
- 6.1.2 Servers
- 6.1.3 Client-server relationship
- 6.1.4 Introduction to NOS
- 6.1.5 Microsoft NT, 2000, and .NET
- 6.1.6 UNIX (SUN, HP, LINUX)
- 6.1.7 Apple
- 6.1.8 Concept of service on servers

6.2 Network Management

- 6.2.1 Introduction to network management
- 6.2.2 OSI and network management model
- 6.2.3 Standards: SNMP and CMIP
- 6.2.4 SNMP operation
- 6.2.5 Structure of management information and MIBs

- 6.2.6 SNMP protocol
- 6.2.7 Configuring SNMP
- 6.2.8 RMON
- 6.2.9 Syslog

Summary

Module 7. Emerging Technologies

Overview

7.1 Basics of Optical Networks

- 7.1.1 Optical business requirements
- 7.1.2 Fiber-optic transmission systems
- 7.1.3 Light
- 7.1.4 Optical transmission
- 7.1.5 Reflection and refraction
- 7.1.6 Optical fibers
- 7.1.7 Loss factors
- 7.1.8 Attenuation
- 7.1.9 Optical filter and amplifier technology

7.2 Optical Transmission and Multiplexing

- 7.2.1 SONET technology
- 7.2.2 SONET/SDH
- 7.2.3 DWDM systems
- 7.2.4 E/O/E conversion
- 7.2.5 Data transmission
- 7.2.6 DWDM advantages

Summary

Case Study: WANs

Appendix: Preparation for Certification Exam
